Create a SEF File from scratch

=====

To all you extremely independent developers out there, here is some good news for you. You can now create your own SEF files from scratch with the latest version of the SEF Manager (5.7.133.365). You no longer need us to create SEF files for you.

All you need is your trading partner's guideline, then fire away!

For instructions on how to create a UN/EDIFACT SEF file, please read
http://www.edidev.com/articles/CreatingSefEdifact/fredi_create_sef_un.html

To create an X12 SEF file, please read
http://www.edidev.com/articles/CreatingSefX12/fredi_create_sef_x12.html

Now that you are empowered, our only plea is for you is to stay within the standard. If you are unsure of the schematics of a guideline, you can use the X12 standard implementation guidelines (or TR3) for reference, which can be purchased from <http://x12.org/>. For UN/EDIFACT guidelines, they can be downloaded for free from <https://www.unece.org/cefact/edifact/welcome.html> (then go to Directories).
